

## XML Processor

### What It Is

The OnBase XML Tagged Import Processor brings XML document data streams into OnBase. The XML can come from a variety of sources, containing one document type or many document types. Once the XML documents are in OnBase, XML style sheets are applied for printing and viewing.

### How It Works

In the Tagged XML Process Configuration, XML tags are associated with OnBase document types and keyword types. When the Tagged XML Process is run, OnBase identifies each document and stores its keywords using the tags. Once processed, the XML document is treated just like any other electronic document stored within OnBase.

### Who Will Benefit

The OnBase XML Tagged Import Processor will benefit anyone with XML or anyone investigating solutions that create XML output. Customers receiving XML data streams containing documents from another application or from a third party can process those documents into OnBase and make them immediately accessible for retrieval or for participation in a Workflow Life Cycle.

The XML data stream may contain:

- Purchase Orders to be accepted by your company.
- Purchase Orders to be sent to vendors
- Customer Statements
- Accounts Receivable Invoices
- Corporate Business Reports
- Credit Bureau Reports
- HL7 Admit/Discharge Transfer Feeds
- Instant Messages
- Mortgage Applications
- Insurance Applications
- Insurance Claims
- Background Checks
- Explanation of Benefits Forms
- HFCA Forms

### Technical Features

- An XML data stream can contain more than one type of document record
- XML documents brought into the system function just like any other OnBase document and can be used in cross-referencing, Workflow, etc.
- The index values found in XML documents also can be extracted for use in other systems or used internally as part of an auto-fill keyset, speeding the index of other documents

### Business Benefits

- Extend the life of legacy systems
- Reuse of data stream
- XML documents are available immediately
- Style sheets used to display appropriate information
- Integration with new technology systems that utilize XML as the output medium for documents

### System Requirements

- OnBase Client License
- Microsoft Internet Explorer 6.0 recommended or 5.5.
- Microsoft MSXML 2.5 SP1 (newer versions are not compatible)
- Windows 98, NT 4 Workstation/Server, 2000, XP
- Supported SQL Database (SQL Server 7/2000, Oracle 8+, Sybase SQL Server 11.5, Sybase SQL Anywhere 5.5.04/7.0.1)
