SCAN. PROCESS. ONE TRANSACTION.

SINGLE- TRANSACTION SCANNING, PROCESSING AND ORGANIZING APPLICATION

Today, most workgroups or small offices are inundated with paper documents, and the conversion of space-consuming paper into compact digital images is becoming a must. Some use a dedicated document scanner, and some use the Scan-to-Network features of their Digital Copier. How do they marry both technologies and still be productive?

The answer is **SPOT** by PSIGEN Software. **SPOT** can drive a scanner and manage documents that have been scanned at a digital copier.

Designed as the central hub of a workgroup document management platform, **SPOT** enables the user to perform image processing, indexing, OCR and conversion to PDF, enabling greater document retrieval flexibility and increasing your organization's efficiency.

With **SPOT's** built-in browser, high-speed document lookup is available from your desktop. By using **SPOT's** flexible migration module, documents may then be migrated to many third-party retrieval systems, or to PSIGEN's **Web IQ** or **Image IQ**, which, coupled with **SPOT's** indexing, provide a complete Enterprise retrieval solution.

LEGEND

⊕ - Optional modules that may be purchased separately.

System Requirements:

- Pentium® III 1GHz (or higher)
- 128MB RAM (or higher)
- Windows NT4 // 2000 // XP

SPOT is an easy-to-use document input application which incorporates functions normally found in high-end document capture products.

SPOT is designed to support personal scanners and Multifunction Devices (MFD) with a variety of additional modules that increase the functionality and flexibility of SPOT.

Other robust, seamless-integration solutions available from PSIGEN:

- **WEB IQ** for Internet Retrieval
- **IMAGE IQ** for Rapid Retrieval
- **SCAN HQ** for High-speed Scanning
